This file contains my personal portfolio of data analytics projects, including Python, PowerBI and Tableau dashboard demos.

Project Overview:
Developed a series of interactive data visualization demos using various visualization tools. These demos effectively transformed complex datasets into clear, actionable insights, demonstrating proficiency in data storytelling and visualization best practices.
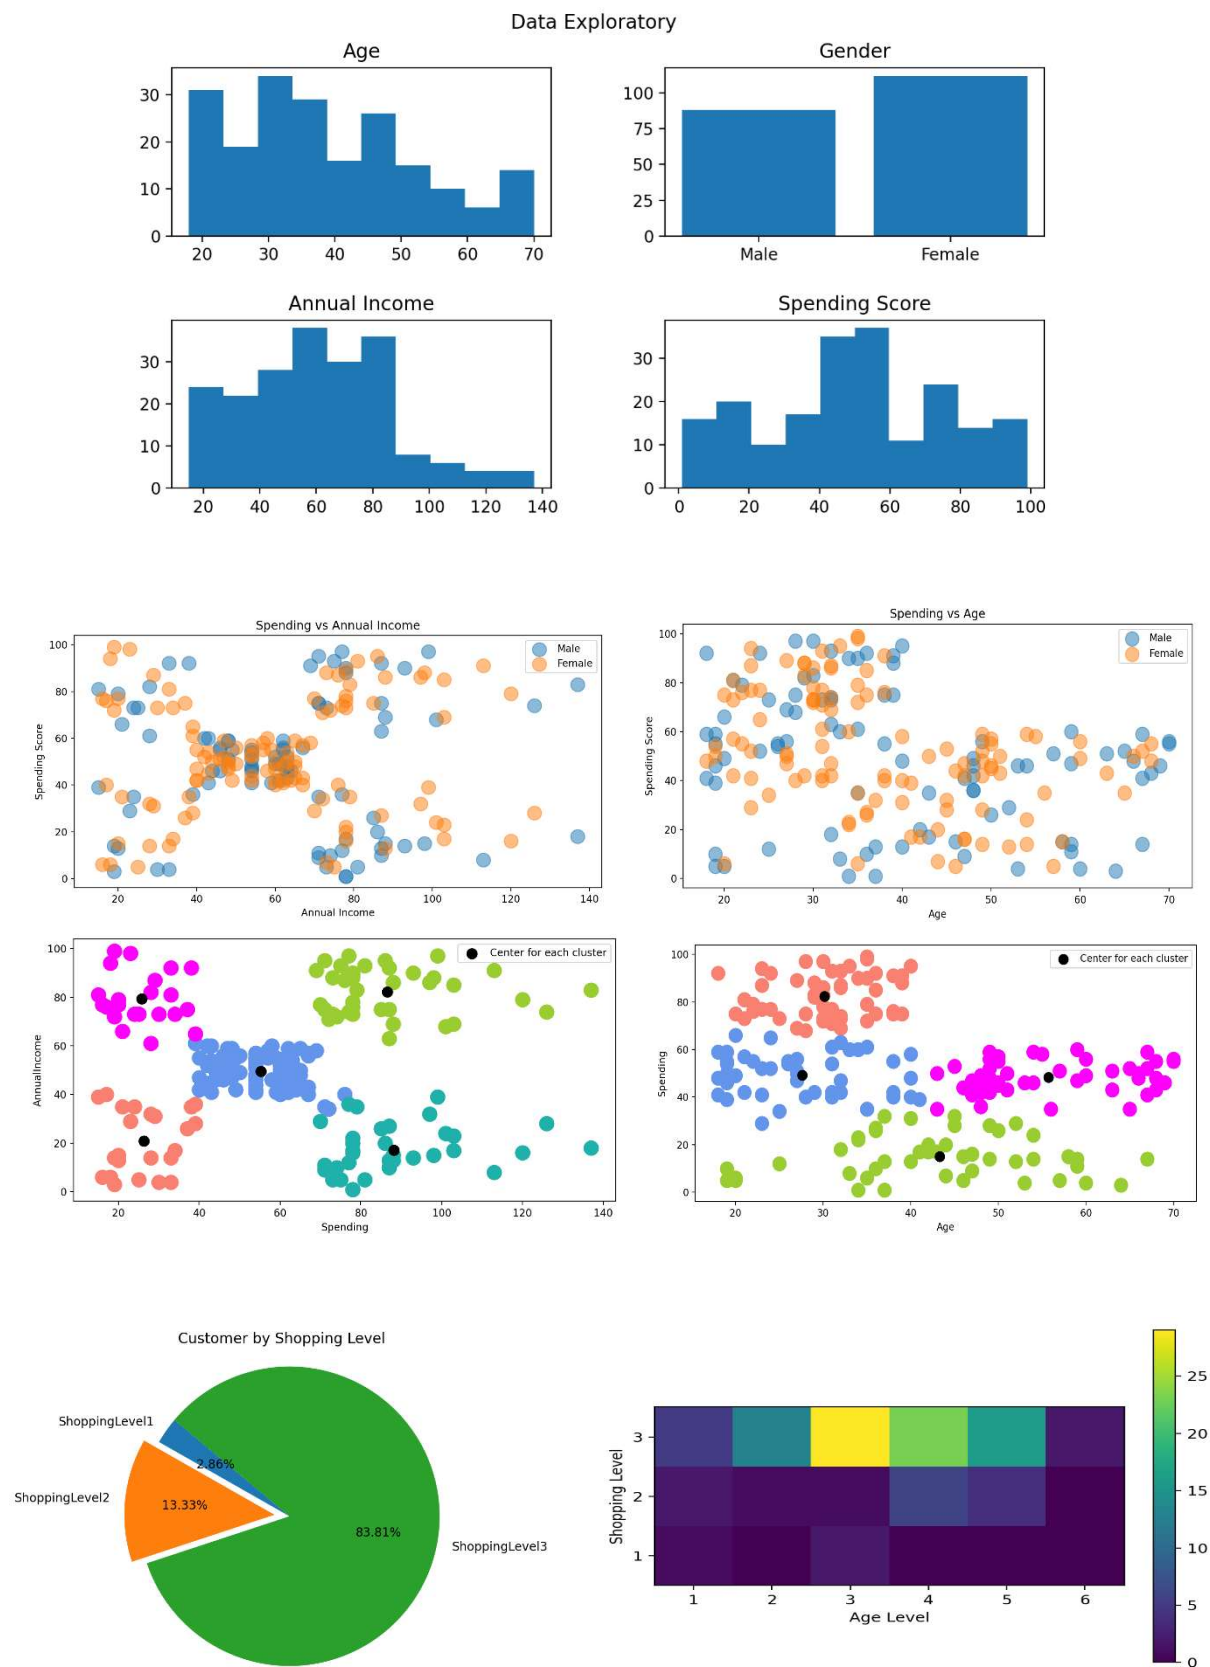

Impact and Value:
Enhanced data-driven decision-making by leveraging advanced visualization techniques, enabling stakeholders to easily interpret data patterns and trends, thereby supporting informed business decisions.
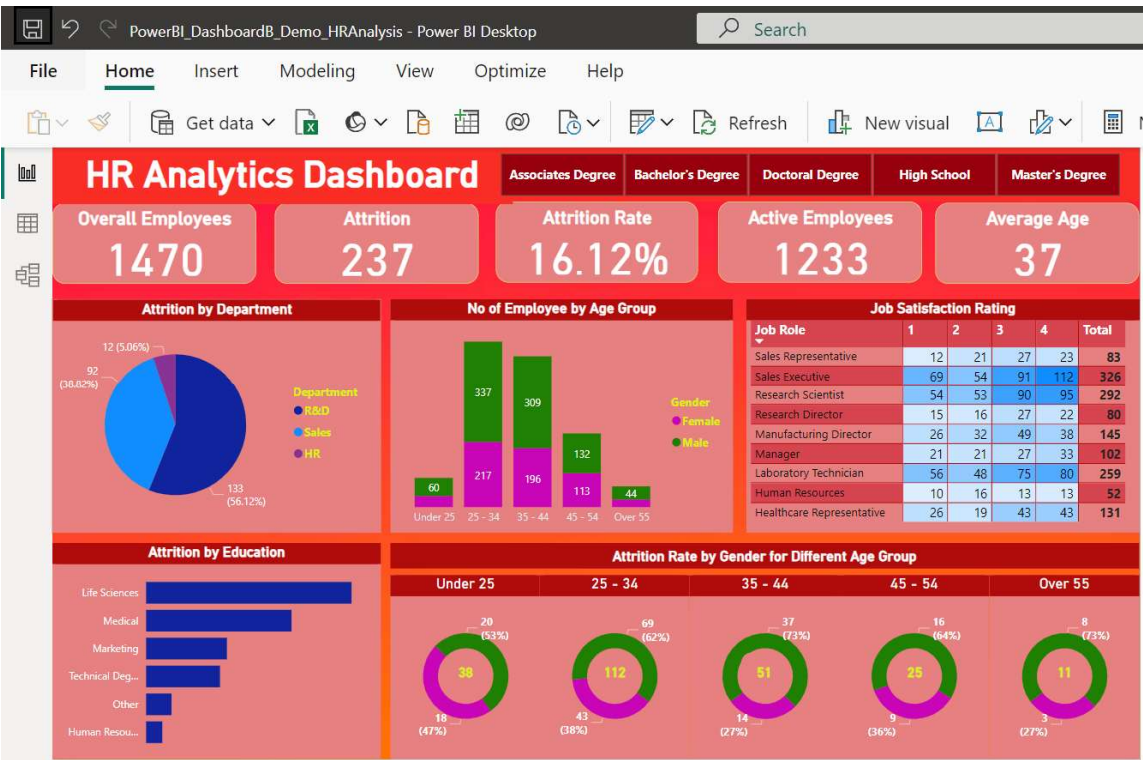

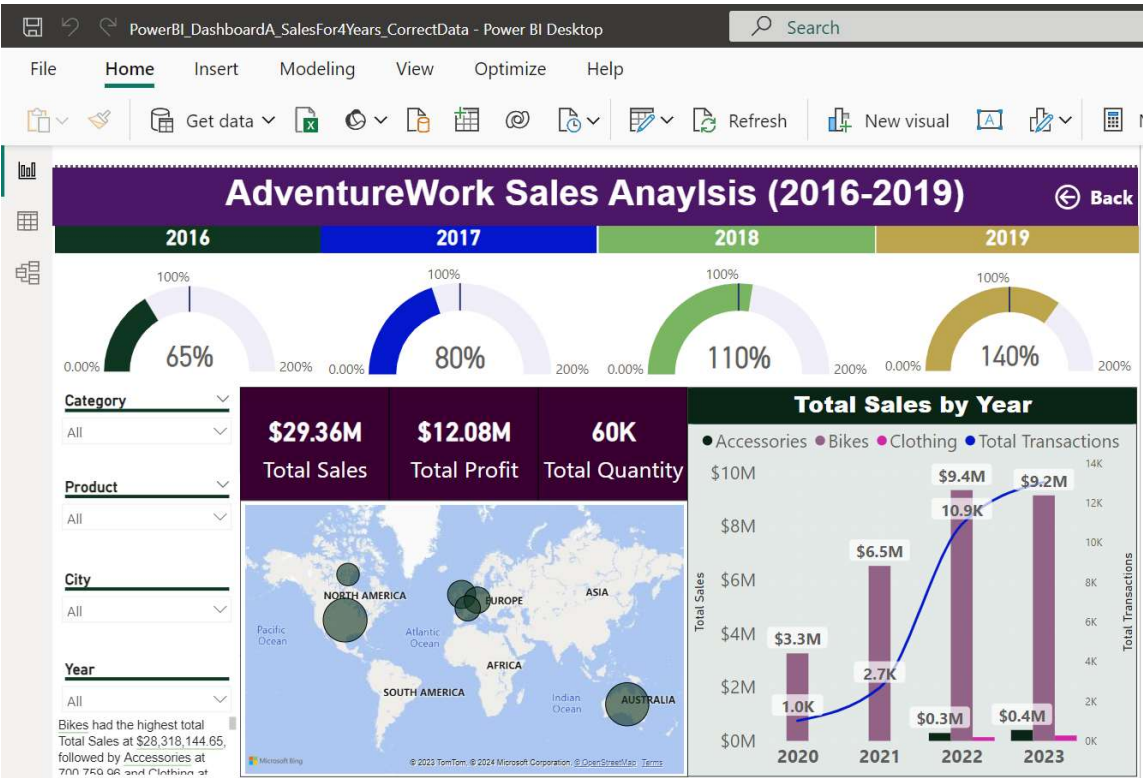

Technologies: Python, SQL, Power BI, Tableau
